Preparing for Disasters

We do not know when and where disasters will occur. Before crisis occurs, it is important that we get the right information and take the right action. For that moment, you always need to be prepared.

Let's Learn Japanese words!

The Meteorological Agency officially announces some weather advisories or warnings in case of bad weather and disasters such as, heavy rain, strong winds, tsunamis and earthquakes. In accord with the announcement, the mayors of cities and villages relevant to the local areas convey the information to the residents.

- ★警報 (*Keiho*, "Warning")・・・Warnings issued by Japan Meteorological Agency when there is a possibility that a serious disaster occurs.
- ★避難勧告 (*Hinan Kankoku*, "Evacuation Advisory")・・・To advise residents to evacuate or find shelter.
- ★避難指示 (*Hinan Shiji*, "Evacuation Order")・・・ This is announced when there is an imminent threat of disaster. This order is used with more reservation than the *Hinan Kankoku*.

These are related to life-threatening situations, so please remember the Kanji along with its pronunciation.

In any case, prompt measures should be taken if you feel like you are in danger.

You can receive an e-mail magazine called "Himeji bousai net bin" which has free information on earthquakes, evacuation orders and weather information by registering on the Himeji City Disaster Prevention website.

Thunder and Lightning

If the sky becomes dark with thick heavy clouds and you hear the rumbling sound of thunder, there is a possibility of lightening striking. Evacuate to a building or other safe place, and take as low a posture as possible. Taking shelter near trees is dangerous, so keep away from them. Also, do not use an umbrella.

Be Aware of Disaster Prevention in Everyday Life!

- 1. Obtain local information provided by the FM radio station Genki (79.3 MHz).
- 2. Frequently check out the information magazines such as "VIVA!ひめじ" and others published by various organizations.
- 3. Participate in Japanese lessons and obtain various types of information from teachers, such as key terms to know during an emergency.
- 4. Take part in the events of your local resident's association and build a relationship with your neighbors in order to support each other in case of emergency.
- 5. Share information with a lot of people by participating in the international exchange events.

Emergency Pack

In order to evacuate lightly, put everything you need in a bag like a backpack, which keeps your hands free, and place it where you can find it easily.

Drinking Water • Portable Radio • Clothes • Food • Valuables • Flashlight • Residence Status Certification etc.

Prepare supplies according to the number of your family members.

Tornados

Violent winds from tornados can destroy buildings in an instant and can cause cars, debris, etc. to be thrown into the air. Pay attention to thunder, clouds and sudden changes in wind, and if cumulonimbus (large) clouds appear, evacuate to a strong building or underground.

Earthquakes / Tsunamis

Japan is a country that has many earthquakes. After earthquakes occur, tsunamis may strike coastline areas. In order to keep damage to a minimum, please follow the instructions below.

- ① When an earthquake strikes, first take shelter in a safe place in the house. Protect your head with a cushion from falling objects. If you are outside when it strikes, be careful of falling objects such as roof tiles and signboards as well as concrete block walls, etc.
- ② After the shaking stops, switch off cookers and heaters to prevent fires.
- ③ After an earthquake there is the danger of tsunami and after-tremors. Listen to the radio or watch TV to get current information on the disaster situation.
- ④ If necessary, evacuate to a nearby disaster shelter. If you do not know where your evacuation shelter is, ask where it is at the city or town office.

Typhoons, Torrential Rain, Sediment Disasters

In Japan, there are many typhoons in August, September and October. These sometimes cause floods, landslides and other serious disasters.

- ① When typhoons approach, listen carefully to the weather forecast and refrain from going out. Close all windows, shutters, etc.
- ② Prepare for an electricity blackout by having candles (or a torch) and portable radio ready.
- ③ If a warning or advisory to evacuate is announced, evacuate to the nearest evacuation shelter as quickly as possible.

Guerrilla Gouu (Guerrilla Downpour)

Guerrilla Gouu (Guerrilla Downpour) occurs when unexpectedly gallons of rain fall, over a short time, in a very narrow area. When you notice the following signs, move to a safe place as soon as possible.

- ① River water becomes murky and carries debris.
- ② Cold winds blow suddenly, and the sky gets dark.
- ③ There is heavy rain and hail.
